Macbook, iPad and Tablet Edition

MY PRIOR SITE

My home portfolio (from June 7, 2016)
Too minimal? Any problems with navigation? This is what I worry about and want to be perfect, even though it never will be.
This is just HTML with Bootstrap to make a sweetly simple modal navigation system.

My home portfolio (from June 7, 2016)

When you click the I Edit Video button, for example, you see this in the modal. Each of these icons move upon hover with just CSS3.
I don't hate jQuery, but it's just lacking in performance and it's vital to always look for better ways to do things.
I like using Sass or SCSS to make my CSS packageable, class-based and uniform in motion.

MY CURRENT SITE

Site Remodel Example

The challenge is to remodel a site that everyone knows.
I imagine you are tired of seeing famous privately owned sites like Facebook and Google get "reimagined",
So I decided to do a site that was built by the government for the public. Which, as you can imagine, needs a makeover.
Why this one? Well, to answer the question you're going to ask in the interview, I support myself as a Uber & Lyft driver.
And everyone who drives in the tri-State knows and dreads this site...

Before

...AND AFTER

Try it yourself and review the code at codepen.io/macaiti/pen/eRgGaO

DAILY UI CHALLENGES
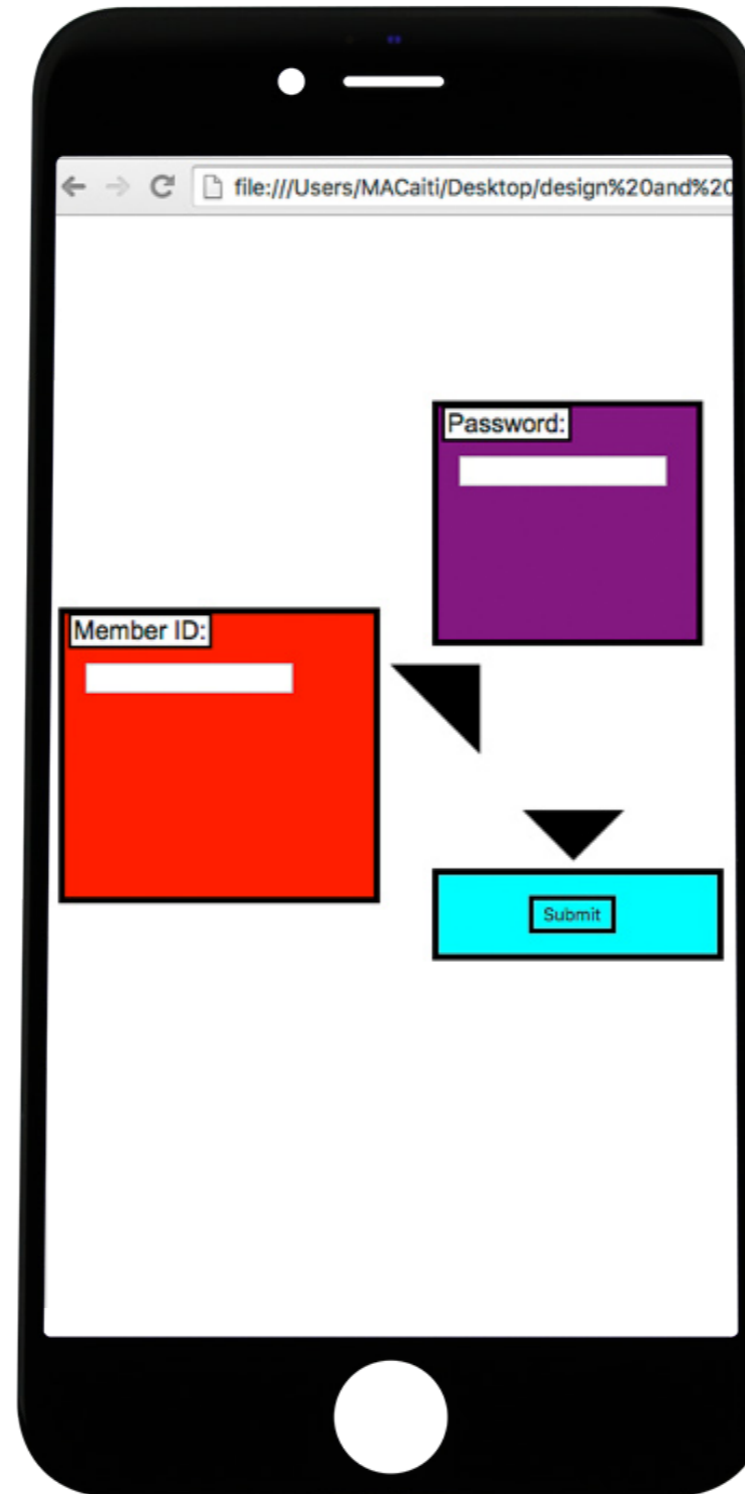

Login prompts.
Chrome screenshot. HTML5 and CSS3.
If Mondrian were a front end developer...he wouldn't do so hot.
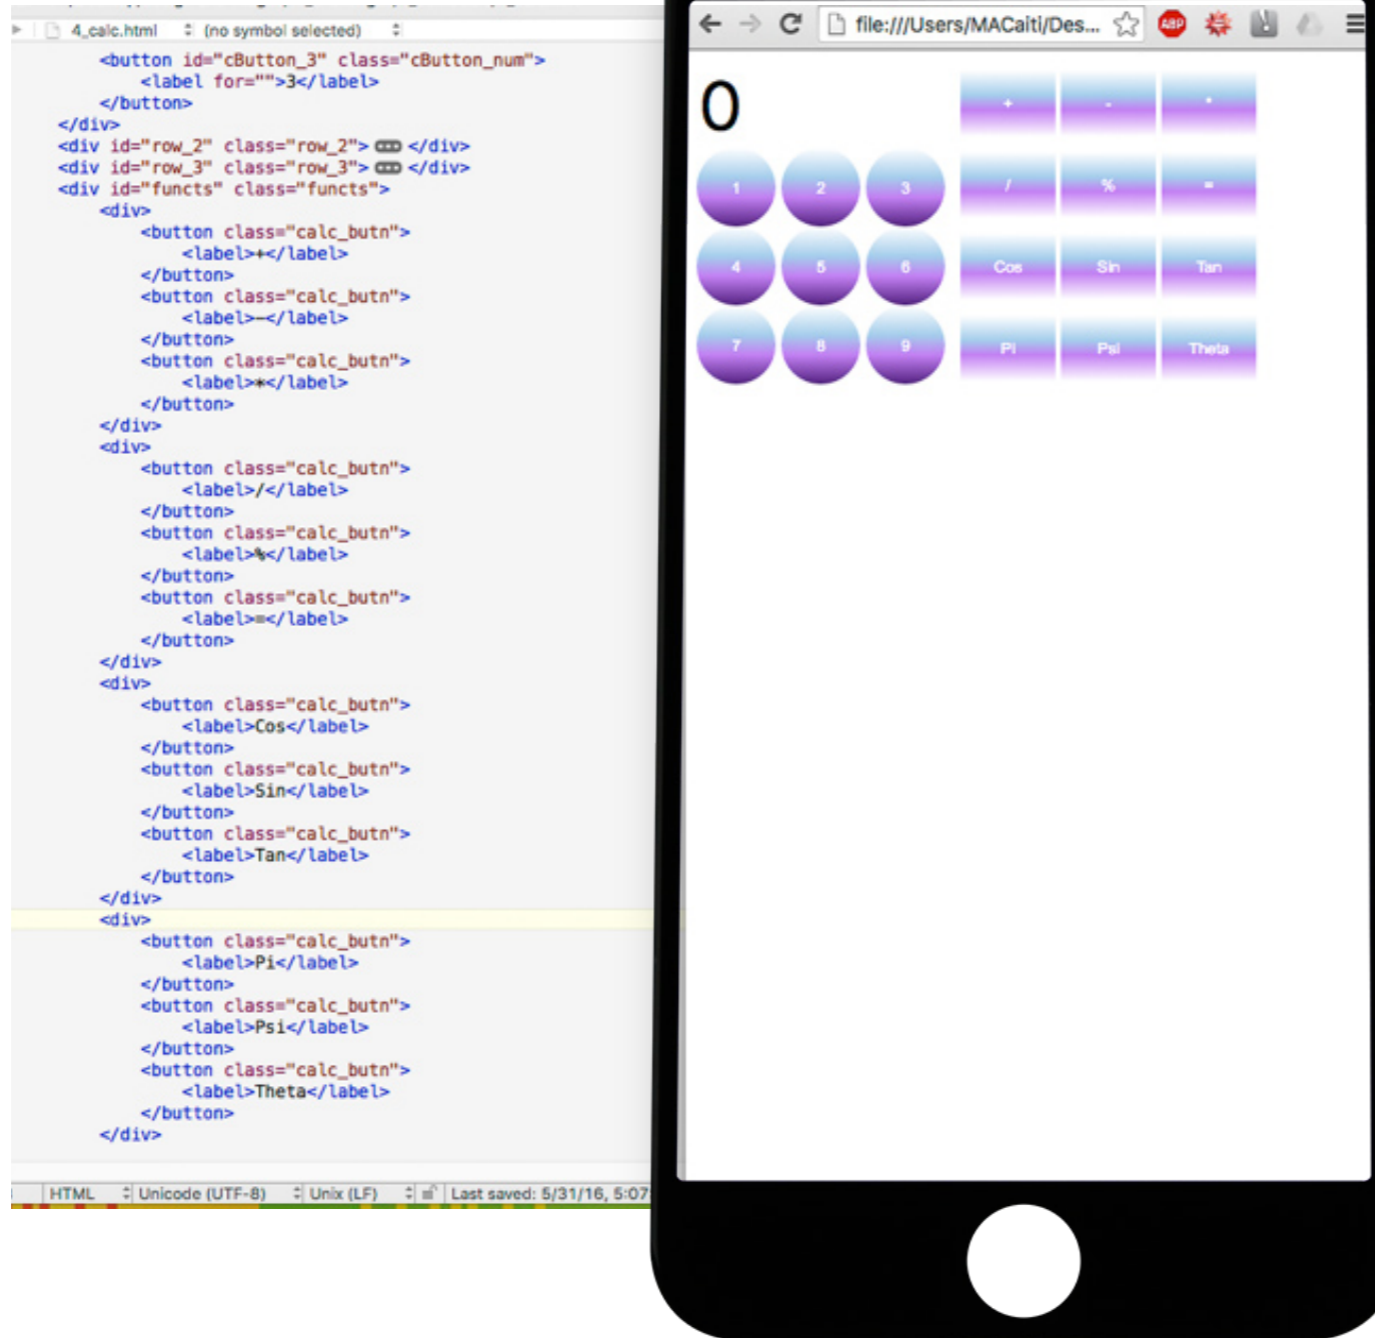

DAILY UI CHALLENGES

Calculator.
Chrome screenshot. HTML5 and CSS3, and I've shown that here too.
I've also built calculators in AngularJS and Java, but those actually worked.

CLIENT WORKFLOW EXAMPLE

Photoshop wireframes.

CLIENT WORKFLOW EXAMPLE

From the clients' design suggestions and ideas, I start a trial HTML5 page.
Here I'm designing a custom Wordpress theme editing CSS3 with extra features in jQuery.

CLIENT WORKFLOW EXAMPLE

This shot demonstrates the page as you roll the mouse around: the front image is gamified to show more information as you hover, and the menu opens up lyrics and music with a nice fade.
